

A Tale of Two Friends: Steiner Systems $S(2,4,v)$ and Curt Lindner

Alexander Rosa
McMaster University
rosa@mcmaster.ca

Among the many areas of combinatorics to which Curt Lindner has made substantial contributions, Steiner systems play an important role. In the context of major developments regarding Steiner systems $S(2,4,v)$, we examine Curt's contributions to the latter which have been numerous - especially to embedding problems, colourings, intersections, and metamorphosis.
