

## TABLE OF CONTENTS

### Preface

## 1. MULTI-DIMENSIONAL SIGNALS AND SYSTEMS

### 1.1 Multi-dimensional Signals

1.1.1. Finite Extent Signals and Periodic Signals

1.1.2. Symmetric Signals

1.1.3. Special Multi-dimensional Signals

### 1.2 Multi-dimensional Transforms

1.2.1 Fourier Transform of Continuous Signals

1.2.2 Fourier Transform of Discrete Signals

1.2.3 Discrete Fourier Transform

1.2.4 Discrete Cosine Transform

### 1.3 Multi-dimensional Systems

1.3.1 Impulse Response and 2D Convolution

1.3.2 Frequency Response

1.3.3 FIR Filters and Symmetry

1.3.4 IIR Filters and Partial Difference Equations

### 1.4 Multi-dimensional Sampling Theory

1.4.1 Sampling on a Lattice

1.4.2 Spectrum of Signals Sampled on a Lattice

1.4.3 Nyquist Criterion for Signals Sampled on a Lattice

1.4.4 Reconstruction from Samples on a Lattice

### 1.5 Sampling Lattice Conversion

References

Exercises

## 2. DIGITAL IMAGES AND VIDEO

### 2.1 Human Visual System and Color

2.1.1 Color Vision and Models

2.1.2 Contrast Sensitivity

2.1.3 Spatio-Temporal Frequency Response

2.1.4 Stereo/Depth Perception

### 2.2 Analog Video

2.2.1 Progressive vs. Interlaced Scanning

2.2.2 Analog Video Signal Formats

2.2.3 Analog-to-Digital Video Conversion

## 2.3 Digital Video

- 2.3.1 Spatial Resolution and Frame Rate
- 2.3.2 Color, Dynamic Range and Bit Depth
- 2.3.3 Color Image Processing
- 2.3.4 Digital Video Standards

## 2.4 3D Video

- 2.4.1 3D Display Technologies
- 2.4.2 Stereoscopic Video
- 2.4.3 Multi-view Video

## 2.5 Digital Video Applications

- 2.5.1 Digital TV
- 2.5.2 Digital Cinema
- 2.5.3 Video Streaming over the Internet
- 2.5.4 Computer Vision and Scene/Activity Understanding

## 2.6 Image and Video Quality

- 2.6.1 Visual Artifacts
- 2.6.2 Subjective Quality Assessment
- 2.6.3 Objective Quality Assessment

References

## 3. IMAGE FILTERING

### 3.1 Image Smoothing

- 3.1.1 Linear Shift-Invariant Low-Pass Filtering
- 3.1.2 Bilateral Filtering

### 3.2 Image Resampling and Multi-Resolution Representations

- 3.2.1 Image Decimation
- 3.2.2 Image Interpolation
- 3.2.3 Multi-resolution Pyramid Representations
- 3.2.4 Wavelet Representations

### 3.3 Image Gradient Estimation, Edge and Feature Detection

- 3.3.1 Estimation of the Image Gradient
- 3.3.2 Estimation of the Laplacian
- 3.3.3 Canny Edge Detection
- 3.3.4 Harris Corner Detection

### 3.4 Image Enhancement

- 3.4.1 Pixel-based Contrast Enhancement
- 3.4.2 Spatial Filtering for Tone Mapping and Image Sharpening

### 3.5 Image Denoising

- 3.5.1 Image and Noise Models
- 3.5.2 LSI Filters in the DFT Domain
- 3.5.3 Local Adaptive Filtering
- 3.5.4 Non-linear Filtering: Order-Statistics, Wavelet Shrinkage, and Bilateral Filtering
- 3.5.5 Non-local Filtering: NL-Means and BM3D Filtering

### 3.6 Image Restoration

- 3.6.1 Blur Models
- 3.6.2 Restoration of Images Degraded by Linear Space-Invariant Blurs
- 3.6.3 Blind Restoration – Blur Identification
- 3.6.4 Restoration of Images Degraded by Space-Varying Blurs
- 3.6.5 Image Inpainting

References

Exercises

## 4. MOTION ESTIMATION

### 4.1 Image Formation

- 4.1.1 Camera Models
- 4.1.2 Photometric Effects of 3D Motion

### 4.2 Motion Models

- 4.2.1 Projected Motion vs. Apparent Motion
- 4.2.2 Projected 3D Rigid Motion Models
- 4.2.3 2D Apparent Motion Models

### 4.3 2D Apparent Motion Estimation

- 4.3.1 Sparse Correspondence, Optical Flow Estimation and Image Registration
- 4.3.2 Optical Flow Equation and Normal Flow
- 4.3.3 Displaced Frame Difference
- 4.3.4 Motion Estimation is Ill-Posed: Aperture and Occlusion Problems
- 4.3.5 Hierarchical Motion Estimation
- 4.3.6 Performance Measures for Motion Estimation

### 4.4 Differential Methods

- 4.4.1 Lukas-Kanade Motion Estimation
- 4.4.2 Horn-Schunk Motion Estimation

### 4.5 Matching Methods

- 4.5.1 Basic Block Matching
- 4.5.2 Variable Size Block Matching

- 4.5.3 Hierarchical Block Matching
- 4.5.4 Generalized Block Matching – Local Deformable Motion
- 4.5.5 Homography Estimation from Feature Correspondences
- 4.6 Non-linear Optimization Methods**
  - 4.6.1 Pel-recursive Motion Estimation
  - 4.6.2 Bayesian Motion Estimation
- 4.7 Transform-Domain Methods**
- 4.8 3-D Motion and Shape Estimation**
  - 4.8.1 Camera Calibration
  - 4.8.2 Affine Reconstruction
  - 4.8.3 Projective Reconstruction
  - 4.8.4 Euclidean Reconstruction
  - 4.8.5 Planar Parallax and Relative Affine Structure Reconstruction
  - 4.8.6 Dense Structure from Stereo
- References
- Exercises

## **5. VIDEO SEGMENTATION AND TRACKING**

- 5.1 Image Segmentation**
  - 5.1.1 Thresholding
  - 5.1.2 Clustering
  - 5.1.3 Bayesian Methods
  - 5.1.4 Graph-based Segmentation
  - 5.1.5 Active Contour Models
- 5.2 Change Detection**
  - 5.2.1 Shot Boundary Detection
  - 5.2.2 Background Subtraction
- 5.3 Motion Segmentation**
  - 5.3.1 Dominant Motion Segmentation
  - 5.3.2 Multiple Motion Segmentation
  - 5.3.3 Region-based Motion Segmentation: Fusion of Color and Motion
  - 5.3.4 Simultaneous Motion Estimation and Segmentation
- 5.4 Motion Tracking**
  - 5.4.1 Graph-based Spatio-temporal Segmentation and Tracking
  - 5.4.2 Kanade-Lucas-Tomasi (KLT) Tracking
  - 5.4.3 Mean Shift Tracking

- 5.4.4 Particle Filter Tracking
- 5.4.5 Active Contour Tracking
- 5.4.6 2D Mesh Tracking

## 5.5 Image and Video Matting

## 5.6 Performance Evaluation

References

Exercises

# 6. VIDEO FILTERING

## 6.1 Theory of Spatio-Temporal Filtering

- 6.1.1 Frequency Spectrum of Video
- 6.1.2 Motion-Adaptive Filtering
- 6.1.3 Motion-Compensated Filtering

## 6.2 Video Format Conversion

- 6.2.1 Down Conversion
- 6.2.2 Deinterlacing
- 6.2.3 Frame Rate Conversion

## 6.3 Multi-Frame Noise Filtering

- 6.3.1 Motion-Adaptive Denoising
- 6.3.2 Motion-Compensated Denoising

## 6.4 Multi-Frame Restoration

- 6.4.1 Multi-Frame Modeling
- 6.4.2 Multi-Frame Wiener Restoration

## 6.5 Multi-Frame Super-resolution

- 6.5.1 What is Super-resolution?
- 6.5.2 Modeling Low Resolution Sampling
- 6.5.3 Super-resolution in the Frequency Domain
- 6.5.4 Multi-Frame Spatial Domain Methods

References

Exercises

# 7. IMAGE COMPRESSION

## 7.1 Basics of Image Compression

- 7.1.1 Information Theoretic Concepts
- 7.1.2 Elements of Image Compression Systems

- 7.1.3 Quantization
- 7.1.4 Symbol Coding
- 7.1.5 Huffman Coding
- 7.1.6 Arithmetic Coding
- 7.2 Lossless Image Compression
  - 7.2.1 Bit-Plane Coding
  - 7.2.2 Run-Length Coding and ITU-T G3/G4 Standards
  - 7.2.3 Adaptive Binary Arithmetic Coding and ISO JBIG Standard
  - 7.2.4 Early Lossless Predictive Coding
  - 7.2.5 ISO JPEG-LS Standard
  - 7.2.6 Lempel-Ziv Coding
- 7.3 Discrete Cosine Transform Coding and JPEG
  - 7.3.1 Discrete Cosine Transform
  - 7.3.2 ISO JPEG Standard
  - 7.3.3 Encoder Control and Compression Artifacts
- 7.4 Wavelet Transform Coding and JPEG2000
  - 7.4.1 Wavelet Transform and Choice of Filters
  - 7.4.2 ISO JPEG2000 Standard
- References
- Exercises

## **8. VIDEO COMPRESSION**

- 8.1 Video Compression Approaches
  - 8.1.1 Intra-frame Compression, Motion JPEG 2000 and Digital Cinema
  - 8.1.2 3D Transform Coding
  - 8.1.3 Motion-Compensated Transform Coding
- 8.2 Early Video Compression Standards
  - 8.2.1 ISO and ITU Standards
  - 8.2.2 MPEG-1 Standard
  - 8.2.3 MPEG-2 Standard
- 8.3 MPEG-4 AVC / ITU-T H.264 Standard
  - 8.3.1 Input Video Formats and Data Structure
  - 8.3.2 Intra Prediction
  - 8.3.3 Motion Compensation
  - 8.3.4 Transform
  - 8.3.5 Other Tools and Improvements

## 8.4 High Efficiency Video Coding (HEVC) Standard

8.4.1 Input Video Formats and Data Structure

8.4.2 Coding Tree Units

8.4.3 Tools for Parallel Encoding/Decoding

8.4.4 Other Tools and Improvements

## 8.5 Scalable Video Compression

8.5.1 Temporal Scalability

8.5.2 Spatial Scalability

8.5.3 Quality (SNR) Scalability

8.5.4 Hybrid Scalability

## 8.6 Stereo and Multi-view Video Compression

8.6.1 Frame-Compatible Stereo Compression

8.6.2 Multi-view Video Coding Extensions of the H.264/AVC Standard

8.6.3 Multi-view Video Plus Depth Compression

References

Exercises

## APPENDICES

### A. VECTOR-MATRIX OPERATIONS IN IMAGE AND VIDEO PROCESSING

A.1 Two-Dimensional Convolution

A.2 Two-Dimensional Transforms

A.3 Three-Dimensional Rotation – Rotation Matrix

References

Exercises

### B. ILL-POSED PROBLEMS IN IMAGE AND VIDEO PROCESSING

B.1 Image Representations

B.2 Overview of Image Models

B.3 Basics of Sparse Image Modeling

B.4 Well-Posed Formulations for Ill-Posed Problems

References

### C. MARKOV AND GIBBS RANDOM FIELDS

C.1 Equivalence of Markov Random Fields and Gibbs Random Fields

C.2 Gibbs Distribution as an A priori PDF Model

C.3 Local Conditional Probabilities from a Gibbs Distribution

References

**D. OPTIMIZATION METHODS**

D.1 Gradient-Based Optimization

D.2 Simulated Annealing

D.3 Greedy Methods

References

**E. MODEL FITTING**

E.1 Least Squares Fitting

E.2 Least Squares Solution of Homogeneous Linear Equations

E.3 Total Least Squares Fitting

E.4 Random Sample Consensus - RANSAC

References
